SUMMARY

Data Scientist and AI Engineer with a Master of Data Science (University of Melbourne) and end-to-end experience building production-grade AI pipelines, workforce analytics systems, and executive BI dashboards. At John Holland, led a team delivering a 91% accurate employee turnover prediction model across 600,000+ HR records. Independently shipped a RAG-based invoice extractor (90% accuracy, 80–90% manual data entry reduction) and a \$109B+ retail analytics dashboard with custom forecasting logic. Equally at home designing LLM architectures in LangChain and presenting findings to executive stakeholders. Fluent in Python, SQL, Power BI, Azure, and GCP motivated by work that turns complex data into decisions that matter.

SKILLS

Languages & Analytics: Python | R | SQL | Statistical Analysis | Predictive Modelling | Feature Engineering.

Machine Learning: Random Forest | Logistic Regression | KNN | Agent-Based Modelling | Social Network Analysis.

AI & LLM: LangChain | RAG Architecture | LLM Integration | Prompt Engineering | OpenAI-compatible tools | Semantic Extraction.

Business Intelligence: Power BI | DAX | Tableau | Excel | Executive Dashboards | Data Storytelling.

Data Engineering: ETL Pipelines | Databricks | PostgreSQL | Snowflake-compatible pipelines | Data Governance.

Cloud Platforms: Microsoft Azure (Fabric, Lakehouse) | Google Cloud Platform (BigQuery).

Tools & Libraries: NetworkX | Streamlit | QGIS | PostGIS | pandas | scikit-learn.

EDUCATION

Master of Data Science

Feb 2023 - July 2025

The University of Melbourne, Parkville, Melbourne

- Delivered stakeholder-facing analytics projects translating complex, multi-system data into actionable organisational insights across technical and non-technical audiences.
- Developed expertise in data governance, spatial analytics, machine learning, and cloud-based BI platforms.
- Completed CITI Program training in Human Subjects Research as part of MIMIC-IV access requirements, demonstrating adherence to ethical data governance standards in regulated healthcare environments.

Bachelor of Technology – Computer Science

Aug 2017 - Jul 2021

Guru Gobind Singh Indraprastha University, Delhi, India

PROFESSIONAL EXPERIENCE

Data Science Intern

Feb 2024 - Oct 2024

John Holland Group, Melbourne, Australia

- Served as sole stakeholder liaison between University of Melbourne and John Holland, owning executive communication and presenting analytical findings to senior decision-makers across both organisations.
- Led Exploratory Data Analysis on 600,000+ HR records on Databricks, identifying workforce composition, termination patterns, and generational distribution across 6 business units.
- Constructed organisational network graphs using Python and NetworkX across 10,000+ employees, calculating Degree, Betweenness, Closeness, and Eigenvector centrality to identify key influencers and model turnover risk.
- Built an Agent-Based Model integrating social network centrality metrics, achieving 91% turnover prediction accuracy directly informing John Holland's workforce retention and succession strategy.
- Resolved complex data integrity issues across historical HR datasets duplicates, supervisor mismatches, schema inconsistencies establishing repeatable governance standards for modelling inputs.

Assistant System Engineer (Data & Reporting)

Aug 2021 – Dec 2022

Tata Consultancy Services, Bengaluru, India

- Generated operational reports and performed data analysis using SQL and Excel for Deutsche Bank Belgium, delivering accurate, timely insights to support business decision-making in a regulated financial environment.
- Analysed production system data to diagnose and resolve incidents, reducing mean time to resolution by 95% through evidence-based root cause analysis and structured problem-solving.

- Monitored and interpreted data across production banking systems, ensuring data quality, compliance, and audit-readiness contributing to 99.5% application uptime through data-driven interventions.
- Collaborated with cross-functional teams to translate data findings into operational improvements, demonstrating ability to communicate technical insights to non-technical stakeholders.
- Handled sensitive financial data with strict adherence to data governance principles, confidentiality requirements, and regulatory compliance standards.

Floor Staff & Supervisor

April 2023 - Present

Toscano's of Kew, Melbourne, Australia

- Leads closing shift operations, delegating tasks across team to meet operational standards under time pressure sustained alongside full-time postgraduate study.
- Trains and onboards new staff across fresh produce sections; delivers consultative customer service during peak periods.

PROJECTS

AI-Powered Invoice Data Extractor

Dec 2025 - Jan 2026

Personal Portfolio Project | RAG | LangChain | LLM | Streamlit | Python

- Built a production RAG pipeline to extract and structure data from unstructured invoice PDFs, achieving 90% extraction accuracy end-to-end.
- Deployed on Streamlit Cloud from document ingestion to structured JSON output estimated to eliminate 80–90% of manual data entry, demonstrating independent delivery of a business-ready AI solution.

Victoria Retail Turnover Analysis (2023–2025)

Jan 2026 - Feb 2026

Personal Portfolio Project | Power BI | DAX | Excel | ABS Data | Business Intelligence

- Designed a 5-page interactive Power BI dashboard analysing \$109B+ in Victorian retail turnover across 30 months and 10+ categories, delivering executive KPIs, category deep dives, seasonality trends, and forward forecasts.
- Authored 8 custom DAX measures including YoY Growth %, Category Share %, and forecasting logic surfacing a 2.9% annual growth trend and a \$12.1B December 2024 spending peak.
- Engineered a multi-layer Excel workbook with dynamic lookups and pivot analysis as the governed data model feeding the Power BI layer end-to-end, from source to story.

AMI Classification & Troponin Prediction

July 2024 - Nov 2024

Academic Project | University of Melbourne | Python | SQL | Machine Learning | Google Big Query

- Designed and executed a clinical cohort extraction from MIMIC-IV, writing complex multi-table SQL joins across patient admissions, lab events, and ICU chart data to isolate AMI-relevant populations.
- Applied and evaluated KNN, Logistic Regression, and Random Forest models; Random Forest achieved 94% accuracy and 0.95 ROC-AUC, confirming troponin as the strongest AMI predictor with direct relevance to reducing diagnostic delay in acute cardiac care.

PROFESSIONAL CERTIFICATIONS

- Databricks Fundamentals Accreditation
- Databricks AI Agents Fundamentals Accreditation

INTERESTS & COMMUNITY

Active member of one of three Chenda percussion groups in Melbourne, performing at cultural events across Victoria. Interests include cinema, emerging AI technology, and travel.
